1st racking 15 days after fermentation – aging on thin lees until April

Alcohol: 12.5% **Sugar:** 1.0 g/l **Acidity:** 2.99g/l

The wine-estate Klur is a family business which has existed in its present form since 1999, but whose tradition of winegrowing and production dates to the 17th century. The family has dedicated itself to implementing Biodynamic practices in the vineyards and the cellars.

Soil: Located in the centre of the Alsatian wine region, the village is nestled in a small valley, protected from the west winds and strong weather conditions, as it takes part of the French region with the least rainfall (Colmar has less than 500ml per year). The characteristic of Katzenthal is the 500 million year old geological crevasse, which has visible and noticeable impact on the wine. Our plots of Wineck-Schlossberg and Steinacker have granite ground, which originates from the rock filled soil of the Vosges Mountains. In front of the village entrance and 600 meters along the crevasse there are soils with chalky and clayey sedimentation, as well as muschelkalk and marl (beneath Hinterburg).

Almost all of our ascending plots with an incline of up to 40% are manually cultivated. Our vines average 35 years, but on some plots they reach an age of 55-60 years.
